CLAIM FOR AARCH64 RISC OS BOUNTY

OPEN LETTER

Dear RISC OS community,

This is an open letter to the RISC OS community regarding my claim against RISC OS Open Moonshot bounty.

Having read the Moonshot bounty from RISC OS Open carefully I have decided to put in a claim against it for the work I have done. It is heartening to see that RISC OS Open are joining us in bringing RISC OS into the future, and look forward to working together.

As the community already know, I have been developing an independent version of RISC OS for the last six years, and that for the last year it has been capable of running AArch64 programs.

I have presented my work many times over the last four years, and I am an active member of the community forums with help, advice and links. RISC OS Pyromaniac as a whole has also been available for use for anyone who wanted it for the same amount of time.

My claim application is linked below should anyone wish to read it. The claim is going to open at the same time as this letter is being published.

gerph (Charles Ferguson)
